

Kettering Medical Center is pleased to introduce our newest capabilities for radiation treatments:

CONTURA™ MULTI-LUMEN BALLOON

TREATMENT BENEFITS:

-  Contura's innovative vacuum port provides better conformality of the lumpectomy cavity.
-  The design of the Contura multi-lumen catheter enables more women to be treated with breast brachytherapy.
-  Radiation doses are delivered internally thereby reducing the risk of tumor recurrence, while conserving healthy breast tissue.
-  Your patients will be treated for 5 days in a beautiful, newly renovated HDR suite.
-  Our hospital setting, plus our dedicated staff of physicists, breast care nurses and support group, exceed patients expectations everyday.
-  Added benefits include house to hospital transportation if needed and the option to stay in a comfortable "living room" setting between the two daily treatments.

In addition to your patients access to Contura, we also offer Mammosite, giving the most experienced breast brachytherapy team in the area.

Call 937-395-8646 for a consult or more information.
